DETAILED ACTION

Drawings

1. Figure 13 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,622,440 to Yamamoto et al. in view of U.S. Patent No. 4,767,114 to Nishimoto and U.S. Patent No. 5,961,234 to Uchikata.

Yamamoto et al. shows a recording apparatus, 10, comprising a transporting roller, 45, for transporting recording sheets, positioned upstream of the recording means relative to the transporting direction, a proximal discharge roller, 54, for transporting the recording sheets, positioned downstream of the recording means relative to the transporting direction, and a distal discharging roller, 53, disposed downstream of the proximal discharging roller relative to the transporting direction.

Yamamoto does not teach that the discharging rollers have a shaft serving as a center of rotation and a rubber roller portion for integrally rotating with the shaft to transport the recording sheets or that the proximal discharging roller shaft is made out of resin and the distal discharging roller shaft is made out of metal.

Nishimoto teaches roller members made of rubber attached to a shaft. See column 2, lines 36-38. Uchikata teaches that roller shafts can be made of metal or resin. See column 1, lines 20-21.

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the discharge rollers of Yamamoto to have the materials of Nishimoto and Uchikata in order to have sheet gripping and water repellent properties.

Double Patenting

4. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in

scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

5. Claim 13 is provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claim 2 of copending Application No. 09/900949. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.
